

A woman with long brown hair, wearing a light-colored floral patterned shirt, is smiling warmly at a man whose back is to the camera. They are seated at a wooden table with a glass of water and some papers. The background is a bright, out-of-focus window.

STILL NEED GLASSES
AFTER CATARACTS?

See more of
the good times

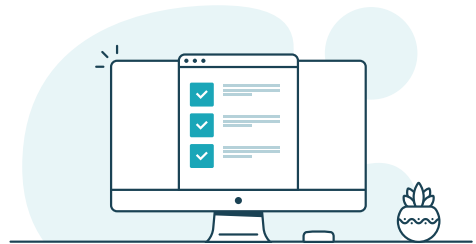

See **MORE** of life

You may have better distance vision after cataract surgery, but do you still need glasses for close-up activities like reading a menu or using your mobile phone?

Sulcoflex Trifocal can offer you the **FREEDOM** to see **CLEARLY** at all distances, without glasses

Sulcoflex Trifocal is the world's first supplementary trifocal intraocular lens (IOL) for people who have already had cataract surgery.

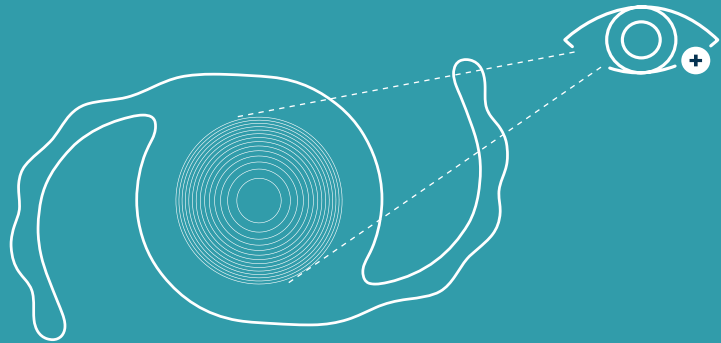

Sulcoflex Trifocal is placed in front of the original lens that was implanted during your cataract surgery. With industry-leading optical technologies designed to enhance your near and intermediate vision, Sulcoflex Trifocal can rid the need to wear glasses for most everyday activities at any distance.

What is Sulcoflex Trifocal?

The lens that was implanted during your cataract surgery has a single point of focus and is called a 'monofocal intraocular lens' (IOL).* This typically means that only objects in the distance (more than 6.5ft in front of you) can be seen in detail. For everything else, you usually need glasses to focus the light as it enters your eye.

Unlike a monofocal IOL, Sulcoflex Trifocal has three points of focus that cover near, intermediate and distance vision. When paired with the monofocal IOL already in your eye, Sulcoflex Trifocal is a flexible solution that can reduce your need to wear glasses for more close-up activities, like reading or gardening.

Near vision

reading, writing, using
your mobile phone

Intermediate vision

using your computer, swinging
a golf club, or doing anything
at arm's length

Distance vision

cycling, driving,
watching TV

Vision with
reading glasses

Vision with
Sulcoflex Trifocal

Results may vary

FREE from frustration

Whether it's because of constantly putting them on and taking them off throughout the day, or accidentally leaving them behind when you need them, using reading glasses can be annoying.

Even simple 'transition' situations such as watching TV and then reading a message on your mobile phone, or reading a menu and then looking up to say your choice can be slowed down by the use of glasses.

Sulcoflex Trifocal is one of the most advanced IOLs available today, giving you the opportunity to increase your independence from wearing glasses for the majority of everyday activities, at any distance.

Unlike other procedures which are permanent with no option of adjustability, Sulcoflex Trifocal can be removed, replaced or even upgraded at any time – providing you with flexibility and peace of mind.

What are the possible **BENEFITS** of Sulcoflex Trifocal?

Convenience - reduce your reliance on glasses for activities at any distance.

Flexible - Sulcoflex Trifocal can be implanted at any time after your cataract surgery.

Safety - similar to your cataract surgery, Sulcoflex Trifocal implantation is fast, safe and clinically proven.

Reversible - unlike other procedures, if you don't adapt to Sulcoflex Trifocal lenses then your eye surgeon can remove them.

Visual adjustments - if your vision after cataract surgery is not as good as it should be then Sulcoflex Trifocal can correct this at the same time.

Sulcoflex Trifocal is suitable if you...

Are keen to get rid of your glasses for activities at near and intermediate distances

Spend a lot of time doing near and intermediate distance activities, like reading or using a mobile phone/computer

Sulcoflex Trifocal may not be suitable if you have co-existing eye conditions or do a lot of night driving – please discuss your suitability for Sulcoflex Trifocal with your eye surgeon.

FREE from your cataracts, now SEE MORE of the things you enjoy

*"I was buying glasses and having them in every room in our home ...
I had to wear them for shopping and cooking and even eating...
and that was becoming really tiresome.*

*The freedom of not wearing glasses and having new
lenses has been extraordinary and wonderful.*

*I haven't had to go looking around my home as to where my
glasses are, no more have I had to ask my husband or
my grandchildren "Where are Grandma's glasses?"*

Susan R, Sulcoflex Trifocal patient (UK)

Sulcoflex Trifocal is made in the UK by Rayner,
a trusted British manufacturer of IOLs for over 70 years.

Clinic contact details:

As with all surgical procedures, the outcomes for a trifocal intraocular lens cannot be guaranteed. It is important to be aware of possible effects on vision after surgery. Please discuss possible risks and side effects with your eye surgeon. Not all patients are suitable for this type of intraocular lens. Your surgeon at the time of consultation will indicate whether this type of lens is suitable for you.

Rayner cannot offer medical advice to members of the public. For such advice you should consult a medical professional. Not all Rayner products are approved for sale in every country.

*Your original lens can be qualified by an eye surgeon.
